Dear WhirlyBird Solutions,

Laurence G. Hanscom Field, a general aviation airport in Bedford, Massachusetts, found the WhirlyBird Repeller to be an effective deterrent with roosting birds on our elevated light poles. Previously, bird activity on and around the light poles presented us with an issue with corrosive droppings on vehicles and aircraft. The WhirlyBird Repeller device, when attached to the top of the light poles, is an energy and maintenance free solution that works for us. We have additional units that we move about the airfield to act as an additional deterrent. We are pleased with the effectiveness of the WhirlyBird Repeller so far!

Thanks!

Keith Leonhardt
